

Job Description

AegisUSA is currently seeking an experienced Identity and Access Management Solutions Engineer to join our team. This position would be focused on consulting, architecting, and delivering high quality Identity and Access Management solutions utilizing TridentHE; AegisUSA's standards based Identity Management solution targeted at the Higher Education marketplace. The Solutions Engineer will work with client personnel to analyze, evaluate, and enhance identity and access management processes and systems. The successful candidate will assist clients and other IAM professionals in detailed architecture and design activities, serving as the subject matter expert in the Identity Management industry. The architect will also be involved in enhancing and optimizing new features for TridentHE.

Responsibilities:

The responsibilities would include:

- Serve as key member of TridentHE implementation team
- Design and architect overall IAM solutions using TridentHE and understand interoperability from an architectural and design perspective
- Hands-on development, testing and implementation of customer solutions using TridentHE and its components including:
 - Groovy Scripting
 - Mule ESB
 - Java
 - Hibernate
 - Bonita
 - SQL
 - Spring MVC
- Install, configure and provide insight to end-to-end Trident Solutions
- Document detailed technical requirements and functional specifications directly with client team.
- Become an active participant in the requirements gathering, development and enhancement of future versions of TridentHE.

A successful candidate will demonstrate a methodology to capture an understanding of the client's existing identity and access management capabilities, be able to develop a delivery plan to configure and optimize an enhanced solution, and ensure customer satisfaction through on-time and on-budget delivery. As a Solutions Engineer, you are an essential member of a small, focused team working on the development and delivery of revolutionary identity and access management technology.

Requirements:

- Masters or Bachelor's degree in Information Technology, MIS, or Computer Science.
- Strong programming experience (3+ years) with J2EE technologies: EJB, XML, JMS, JPA, JSP, ORM Hibernate, etc
- Experience (3+ years) with various application servers and Enterprise Identity Management technologies such as LDAP, Active Directory, Kerberos, WebSSO, Shibboleth, etc...
- Hands on experience with Open Source technologies: Spring framework, Hibernate, Mule ESB (or equivalent experience)
- Dedication to teamwork
- Advanced written and verbal communication skills
- Integrity within a professional environment

Company Description
