

Job Description

AegisUSA is currently seeking an experienced Identity and Access Management Solutions Engineer to join our team. This position would be focused on consulting, architecting, and delivering high quality Identity and Access Management solutions utilizing the Oracle Waveset Identity Manager (former SUN Identity Manager). The Solutions Engineer will work with client personnel to analyze, evaluate, and enhance identity and access management processes and systems. The successful candidate will be responsible for all phases of multiple Waveset Identity Management projects including maintenance and minor enhancements to current, production systems.

Responsibilities:

The responsibilities would include:

- Serve as key member of Waveset Identity Manager implementation team.
- Design and architect overall IAM solutions using Waveset and understand interoperability from an architectural and design perspective.
- Hands-on development, testing and implementation of customer solutions using Waveset.
- Install, configure and provide insight to end-to-end Waveset Solutions.
- Document detailed technical requirements and functional specifications directly with client team.
- Provide support for existing Waveset implementations

A successful candidate will demonstrate a methodology to capture an understanding of the client's existing identity management capabilities, be able to develop a delivery plan to configure and optimize an enhanced solution, and ensure customer satisfaction through on-time and on-budget delivery. As a Solutions Engineer, you are an essential member of a small, focused team working on the development and delivery of established identity and access management technology.

Requirements:

- Masters or Bachelor's degree in Information Technology, MIS, or Computer Science.
- Experience (1+ years) with Oracle Waveset Identity Manager, Sun Identity Manager
- Strong programming experience with J2EE technologies: EJB, XML, JMS, JPA, JSP,
- Experience (1+ years) with various application servers and Enterprise Identity Management technologies such as LDAP, Active Directory, Kerberos, WebSSO, Shibboleth, etc...
- Dedication to teamwork
- Advanced written and verbal communication skills
- Integrity within a professional environment

Company Description

Founded in 2004, AegisUSA is an industry leading Identity Management (IAM) solution provider for Higher Education. AegisUSA provides a continuum of world-class identity and access management solutions including software, affordable appliance based solutions, and managed services.
