AegisUSA Becomes InCommon Affiliate

Added by [Dean Woodbeck](#), last edited by [Dean Woodbeck](#) on Apr 22, 2010 ([view change](#))

Labels:

ANN ARBOR, Michigan - April 22, 2010 - AegisUSA, an identity management solution provider with extensive expertise in higher education, has become an InCommon Affiliate.

InCommon is the U.S. trust federation in higher education, providing a privacy-preserving, secure method for higher education institutions and their partners to offer single sign-on convenience to their faculty, researchers, students and staff. The Affiliate Program provides the research and education community with a way to connect with partners able to help build the necessary underlying infrastructure that supports federated access.

"We are excited to participate as an affiliate member of InCommon," said Ralph Armijo, chief executive officer and president of AegisUSA. "AegisUSA's goals are mutually aligned with InCommon. Our solutions are focused on enabling membership growth and effective utilization through simplified access and identity management solutions for new and existing members."

AegisUSA's solutions include identity appliances, identity assessments, and custom implementations for Oracle, Sun, Microsoft, and open-source software. Aegis's identity appliances solve many of the common identity and access management problems in higher education, including password management and single sign-on. Aegis's Federated Identity Appliance for Education provides the turnkey, production-ready infrastructure necessary to enable federated single sign-on with participants in the InCommon Federation.

"The AegisUSA experience in identity management comes at a time of great growth and interest in federating identity management infrastructure," said John Krienke, chief operating officer of InCommon. "Their support can provide a key partnership link for higher education participants."

For more information, and a list of current affiliates, go to www.incommon.org/affiliate.

ABOUT AegisUSA

AegisUSA is an identity management solution provider with deep expertise in higher education. Building on experience with more than 60 clients, AegisUSA has developed solutions including identity appliances, identity assessments, and custom implementations for Oracle, Sun, Microsoft, and open source software. Aegis's identity appliances solve many of the common IAM problems in higher ed, including Password Management, SSO, and Federation. Aegis's Federated Identity Appliance for Education provides turnkey, production-ready infrastructure necessary to enable federated SSO with members of the InCommon Federation. For more information,

ABOUT InCommon

The InCommon Federation, operated by Internet2, provides a privacy-preserving, secure method for higher education institutions and their partners to offer single sign-on convenience to their faculty, researchers, students and staff. Through InCommon, individuals no longer need to maintain multiple passwords and usernames and online service providers no longer need to maintain user accounts. The educational institution manages the level of privacy and security for its constituents. For more information, see www.incommon.org.
