AEGISUSA JOINS PASSLOGIX PLATINUM PARTNER PROGRAM

Adds v-GO Sign-on Platform to Identity & Access Management Services

GREENWOOD VILLAGE, CO, and NEW YORK, NY (August 13, 2007) – Passlogix®, Inc., developer of the market-leading v-GO® Sign-on Platform™ for enterprise single sign-on (ESSO), today announced the addition of Colorado-based AegisUSA to its Platinum Partner program. AegisUSA selected v-GO to expand its portfolio of identity and access management solutions in order to equip clients with secure single sign-on capabilities that eliminate the need to deploy and manage multiple application passwords.

“Our goal in building our solution suite has been to partner with best-of-breed solution providers across the identity and access management framework. Passlogix was the clear choice in the ESSO space,” said George Schad, President and COO of AegisUSA. “v-GO is the broadest and most developed ESSO platform in the industry, and it integrates with all leading strong authentication devices and user provisioning systems. This gives us the tools we need to help clients increase user productivity, reduce security risks, and ensure regulatory compliance in accessing business data.”

v-GO will complement AegisUSA’s total solution set, which spans directory services, identity integration, access control, provisioning, compliance, and federated & Web identity integration. The firm services customers in the higher education, state and local government, healthcare and enterprise markets throughout the U.S.

“AegisUSA focuses exclusively on identity and access management, they understand the importance of ESSO in building a complete identity infrastructure, and they have encountered v-GO on several of their identity integration projects so they have an appreciation for the benefits of the platform,” said Scott Bonnell, Vice President of Business Development for Passlogix. “They also have a solid customer base in the industry sectors that have the greatest need for ESSO, including Fortune 2000 companies. All of these factors will make them a strong addition to our partner network.”

The v-GO Sign-On Platform is built around v-GO SSO (v-GO Single Sign-On®), which automatically and securely signs the user into any number of Windows, mainframe or Web applications after a single network logon without additional identification and authentication processes. This reduces the security gaps, administrative overhead, user frustration and help desk costs associated with the use of multiple application passwords.

The v-GO platform also includes five add-on products that extend v-GO’s single sign-on capabilities to any form of strong authentication and to kiosk environments; enable all identity provisioning systems to automatically inject user credentials into v-GO SSO;

permit self-service reset of forgotten Windows passwords; and centralize management of strong authentication devices.

Enterprises frequently deploy v-GO before implementing identity management or two-factor authentication because v-GO can go live quickly and seamlessly integrate with all major identity management systems as well as any combination of smart cards, badges, proximity devices, tokens or biometrics. v-GO can be deployed on existing servers without adding dedicated or proprietary hardware, scales to support organizations of any size, and is used in enterprises around the world with 6 million licenses sold.

Passlogix solutions are available immediately from AegisUSA (www.aegisusa.net).
